adults in the U.S are obese

36%

of Americans dine at a fast food restaurant daily

healthy eating

needs to be simple

wellbeingeating.com

Healthy eating made easy for YOU!

mission statement

“We built WellBeing to be a solution that can make figuring out proper nutrition easier for all. By providing information on recipes, ingredients, and nutrients we want to help people figure out how to eat excellently in their own way.”

audience

- college students
- busy workaholics
- health-conscious people
- bodybuilders

functionality

- MongoDB Database
- Java-based back-end
- JSP, HTML, CSS - based front-end

self critique

How did we do?

- What did we do well?
 - **Communication**/timely updates
 - **Task delegation** and sub-teams
- What can we do better?
 - **Feedback**
- What did we learn?
 - **Sub-teams** are the best!
 - **Wicked Problem** is real!
 - **API usage limits! Beware!**

- What did they do well?
 - Upgraded **UI difference** from beginning to end
 - The addition of a **subscription email** is nice
- What did we learn from their website?
 - **Complex features** can **take away** from overall **UI appeal** on a timeline
- What can they do better?
 - Although the **UI could be improved**, functionality is way above and beyond.
- What puzzles us about their website?
 - Why not have a white background on model pages? The **picture background** is **distracting**.
